Wiring Diagram

Functional principle

The high-resolution safety light screen is an emitter and receiver in one without a blind zone. As the system is optically synchronized, emitter/receiver wiring is superfluous. The receiver's safety switching outputs are directly connected to a load relay (e.g. IM-T-9A) and trigger an immediate stop of dangerous machine cycles. Personnel safety category PLe pursuant to ISO 13849-1 is ensured through 2-channel monitoring of the switching device and the principle of diverse redundancy by which two processors control each other mutually.
